LEC Celebrates 30 Years of Excellence in Engineering Smarter Systems that Move Industry Forward

Jackson, MS -- LEC, leaders in automation control engineering and Industrial Internet of Things (IIoT) enablement, is celebrating its 30-year anniversary.

In 1989 LEC began as a controls, automation and systems integration-based engineering firm, providing plant floor application services through machine OEMs.

Over the course of the last three decades, LEC has continued to expand on its initiatives and competitive services. LEC has grown from a small niche integration firm into a Global automation engineering, control systems and Industrial Internet of Things (IIoT) technology provider for clients in industrial verticals.

LEC President, Harold Hogue, remarked: "This is an incredible milestone that has been achieved through the hard work, passion and dedication of our extremely talented team members. We have dedicated ourselves to 30 years of product innovation, engineering and business process improvements to provide our clients with the highest quality solutions and services."

Throughout 2019, LEC will be taking a look back at the Company's achievements and plans for the future.

"To this day LEC is still driven by the entrepreneurial spirit we started with in 1989, which has enabled us to consistently push new boundaries and expand our offering portfolio," said Hogue. "Our strategy of establishing and developing core business areas that address the changing needs of our clients has enabled us to foster a culture of innovation and engineering excellence."
